

Bytes CIS Gap Analysis Session

Bytes CIS Gap Analysis Session gives businesses a Security Posture Gap Analysis based on the CIS Top 18 Controls. Those 18 security best practices are most likely to have a material impact on your business' ability in preventing breaches and reducing risk. An expert analysis of security solution details by our engineers will provide tangible recommendations on improving/refining your security provision to maximise risk-reduction and compliance while keeping expenditure under control.

What to Expect:

Discovery – Solution Mapping

We collate information on your current security solutions, their functionality & utilisation

Analysis – Best Practice benchmarking

We compare your current security provision across multiple areas to the top 18 CIS Controls

Consultation – 121 sessions with findings

We deliver a session outlining the results, identifying key focus areas & outlining improvement recommendations

Reporting - RAG Matrix & full recommendations

We provide a detailed report with RAG Matrix, tangible next steps, improvement areas & impact of gap analysis

Key Features & Benefits:
