

Bytes Quantum Detect

Intelligent information security for Microsoft Azure and Office 365

Leverage the power of AI and keep your information safe with Quantum Detect – the revolutionary information security solution for modern cloud-based businesses.

What is Quantum Detect?

Enterprise information sharing has shifted to the cloud. Whilst this has many benefits, it also poses security challenges when information is shared both in and outside the business. Solving such issues can be complex and time consuming for InfoSec teams.

Quantum Detect changes this. It ensures any information shared in Azure and Office 365 is secure and compliant with business policies. As it is powered by Cognni AI technology, it autonomously maps, detects and investigates information sharing, learning user behaviour to provide visibility and highlighting potential incidents before they become risks.

Capabilities

Autonomous Detection

Quantum Detect uses human-like technology to detect unusual information sharing, with no user involvement necessary. Get cognitive insights out of the box or create custom insights for your needs.

Autonomous Mapping

Quantum Detect maps information entirely autonomously, giving you deep visibility of complex information sharing situations in Azure and Office 365. You'll know exactly where your information is, where it is going and who is sharing it.

Autonomous Investigation

Works like an extra member of the InfoSec team, with out of the box intelligent threat investigation. Threats are identified before they have a chance to wreak havoc - leaving your team free to focus on the bigger picture and make the right decisions.

Benefits

- ✓ Adds visibility to cloud activities
- ✓ Saves 100's of work hours
- ✓ No end user involvement or disruption to productivity
- ✓ No setup or lengthy implementation
- ✓ Intelligent – clears the noise and focuses on real risk
- ✓ Helps you optimize your security policies
- ✓ Enables better data governance
- ✓ Keeps your information in Azure and Office 365 secure
- ✓ Reduces barriers to company-wide cloud adoption
