

PRIVILEGED ACCOUNT MANAGEMENT AT ENTERPRISE SCALE

Discover, manage, protect, and audit privileged account access across your organization

As cyber threats continue to increase in volume and sophistication, effective and agile Privileged Account Management (PAM) has become mission-critical for organizations of every size. Now you can adopt an aggressive privileged account security posture with Secret Server, the only fully featured PAM solution available both on premise and in the cloud. Empower your security and IT ops teams to secure and manage all types of privileged accounts quickly and easily.

PROTECT PASSWORDS

- **Secure vaulting and password management** for privileged accounts across your enterprise infrastructure
- **Proactive protection** including automated password changing, heartbeat, and configurable policies
- **Intelligent workflow** including checkout, privileged access request, justification requirements, and tiered approval

ELIMINATE INTERNAL AND EXTERNAL THREATS

- **Discovery** finds service accounts across the entire network
- **Custom script support** to configure dependencies, hooks, and integrations on your own terms
- **DevOps workflow** security via the Secret Server SDK extends PAM protection to DevOps
- **Password Rotation** updates without breaking dependencies

AUDIT AND REPORT

- **Auditing, reporting, and alerts** scheduled or custom help proactively meet compliance obligations
- **Granular policy control** applies across all devices and teams

DETECT SUSPICIOUS ACTIVITY

- **Real-time Session monitoring & control** includes proxying, session recording, and keystroke logging
- **Integrations** with SIEM and vulnerability scanners provide visibility
- **Behavior analysis** leverages machine learning to identify abnormal user behavior

GET STARTED RAPIDLY

- **Configuration and deployment** is wizard based to get you started fast
- **Readily customizable** means no need to spend extra time or money

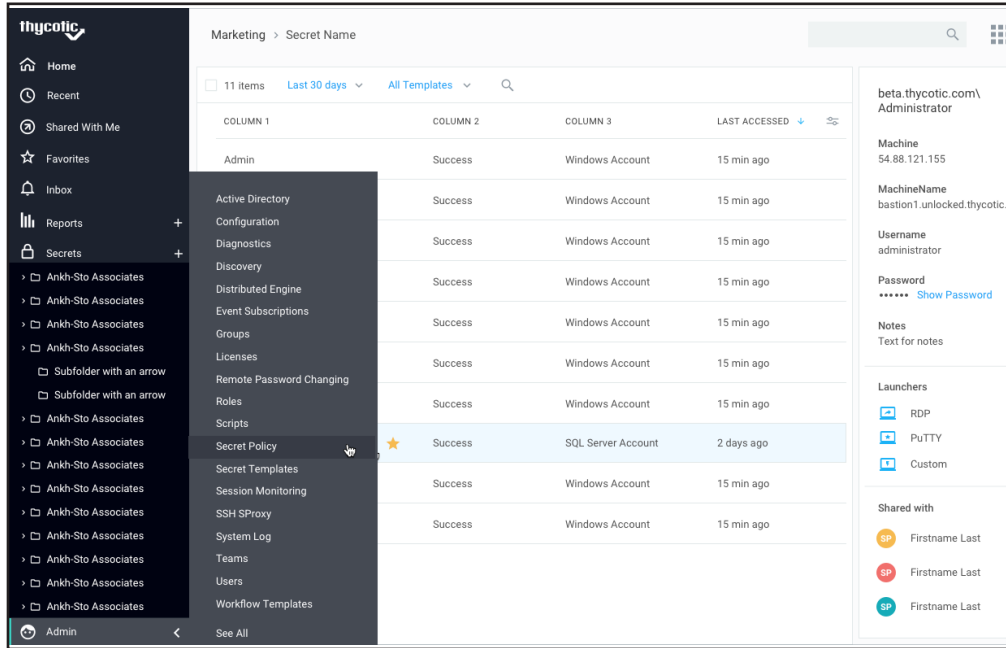

Secret Server Benefits

- **Improve Security** - Protect privileged accounts to tighten your attack surface and build resilience
- **Unburden IT teams** - PControl PAM easily with a simplified interface and streamlined design
- **Realize Fast ROI** - Configure rapidly with wizard-driven setup and configuration
- **Meet Compliance Mandates** - Avoid significant financial penalties
- **Scale your PAM** - Deploy elastically within Thycotic's enterprise-secure architecture

Comprehensive Security Controls to Protect your Infrastructure and Network

Secret Server empowers your security teams with the powerful control needed to proactively protect your infrastructure and network, without the complexity or management burden of legacy PAM solutions. Secret Server makes powerful PAM simple.

Usable Security

Our team of Human Computer Interaction experts designed Secret Server with end users in mind to:

- Mitigate the risk of human error with a streamlined, intuitive interface
- Simultaneously address both usability and security concerns to build truly secure systems
- Minimize complexity to keep teams productive and in control

An Edition Designed for Every Organization, Available On-Premise or in the Cloud

Secret Server Vault Edition	Secret Server Professional Edition	Secret Server Platinum Edition
Affordable, easy-to-use PAM protection for your business	Intelligent PAM automation to meet CyberSec best practices & compliance obligations	Next-generation PAM for maximum security and agility
