## VISIBILITY + ANALYTICS

Visibility and Analytics tools provide a holistic view of all ongoing events and traffic passing through organisations networks, whether on-premise, or in the cloud.

By utilising a tool that provides Visibility & Analytics, organisations are able to prioritise our time on the tasks that need it the most.

Enriched by data from all other technology areas, Visibility & Analytics tools allow for a single pane of glass to quickly distribute tasks and gain insights into what our security investments are doing and where attention may be needed.

[LEARN MORE](#)

“Visibility provides a **comprehensive understanding** of activity, allowing organisations to **identify and mitigate** security threats in real-time. Analytics helps organisations to analyse the data collected from their business, **detect patterns, and make informed decisions**”.
